

Database Preservation at the National Archives of Australia

What I'll talk about today:

- History of digital records at NAA
- Existing approaches to database transfer and preservation – 2 examples
- Database Preservation Project

A brief history of digital preservation at NAA

A brief history of Digital Preservation at NAA

Current approach at NAA

- Not many database transfers received
- Transfers are ad hoc – no standard approach
- We've set a very low bar for agencies (keep it simple)
- Data exports in an open format – plain text, CSV
- Transfer very little technical or structural metadata
- Haven't always asked for data dictionaries or other technical documentation
- Consequently, we have very little information about how these systems were managed

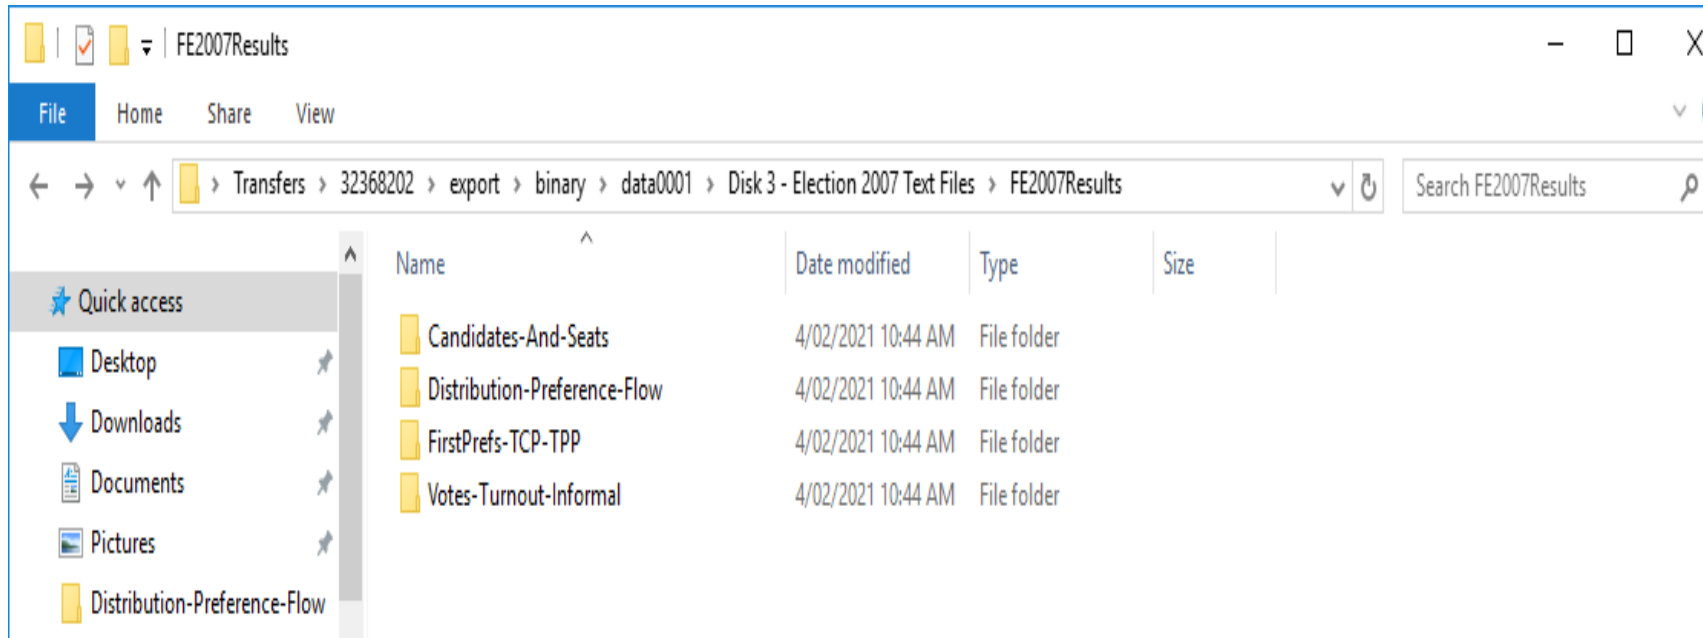

Examples from the NAA collection:

1. 2007 Federal Election Results

Federal Election Results – Disposal Class for Election Results

<i>Entry</i>	<i>Description of Records</i>	<i>Disposal Action</i>
Class no. 11729	Final versions of significant reports and returns on the conduct of elections, ballots and referendums. Includes: <ul style="list-style-type: none">• official reports on Federal elections presented by the Electoral Commissioner following an election• summary reports on the conduct of referendums• official results of elections or referendum in statistical tables• divisional returning officer returns• election journals.	Retain as national archives

Issues

- Description
- Technical documentation
- Raw data format
- You can probably think of other issues

Examples from the NAA collection:

2. Australian Valuation Office Database (2014)

Native SQL files

Preservica file format identification

The screenshot displays the Preservica web interface. At the top, the logo and user information 'James Doig' with a language dropdown set to 'English' are visible. A navigation menu includes 'Dashboard', 'Ingest', 'Access', 'Preservation', 'Data Management', 'Administration', and 'Help'. A search bar labeled 'Search Archive' is on the right. The breadcrumb trail shows the path: 'Root > A14526 > 2020/00470852 > Property Val... > VOIS'. Below the breadcrumb, there are tabs for 'Properties', 'Advanced', 'History', 'XML', and 'Actions', with 'Advanced' selected. A 'Preservation Download' button is located in the top right of the main content area. On the left, a tree view shows the hierarchy: 'Asset: VOIS' containing 'Representation: Preservation 1', which contains 'Content: VOIS', which contains 'Generation 1', which contains 'Bitstream 1: VOIS'. The 'Generation 1' node is highlighted. On the right, the details for 'Representation: Preservation 1 / Content: VOIS / Generation 1' are shown in a table:

Representation: Preservation 1 / Content: VOIS / Generation 1	
Active	Yes
Original	Yes
Label	
Format Group	

XML files of database tables

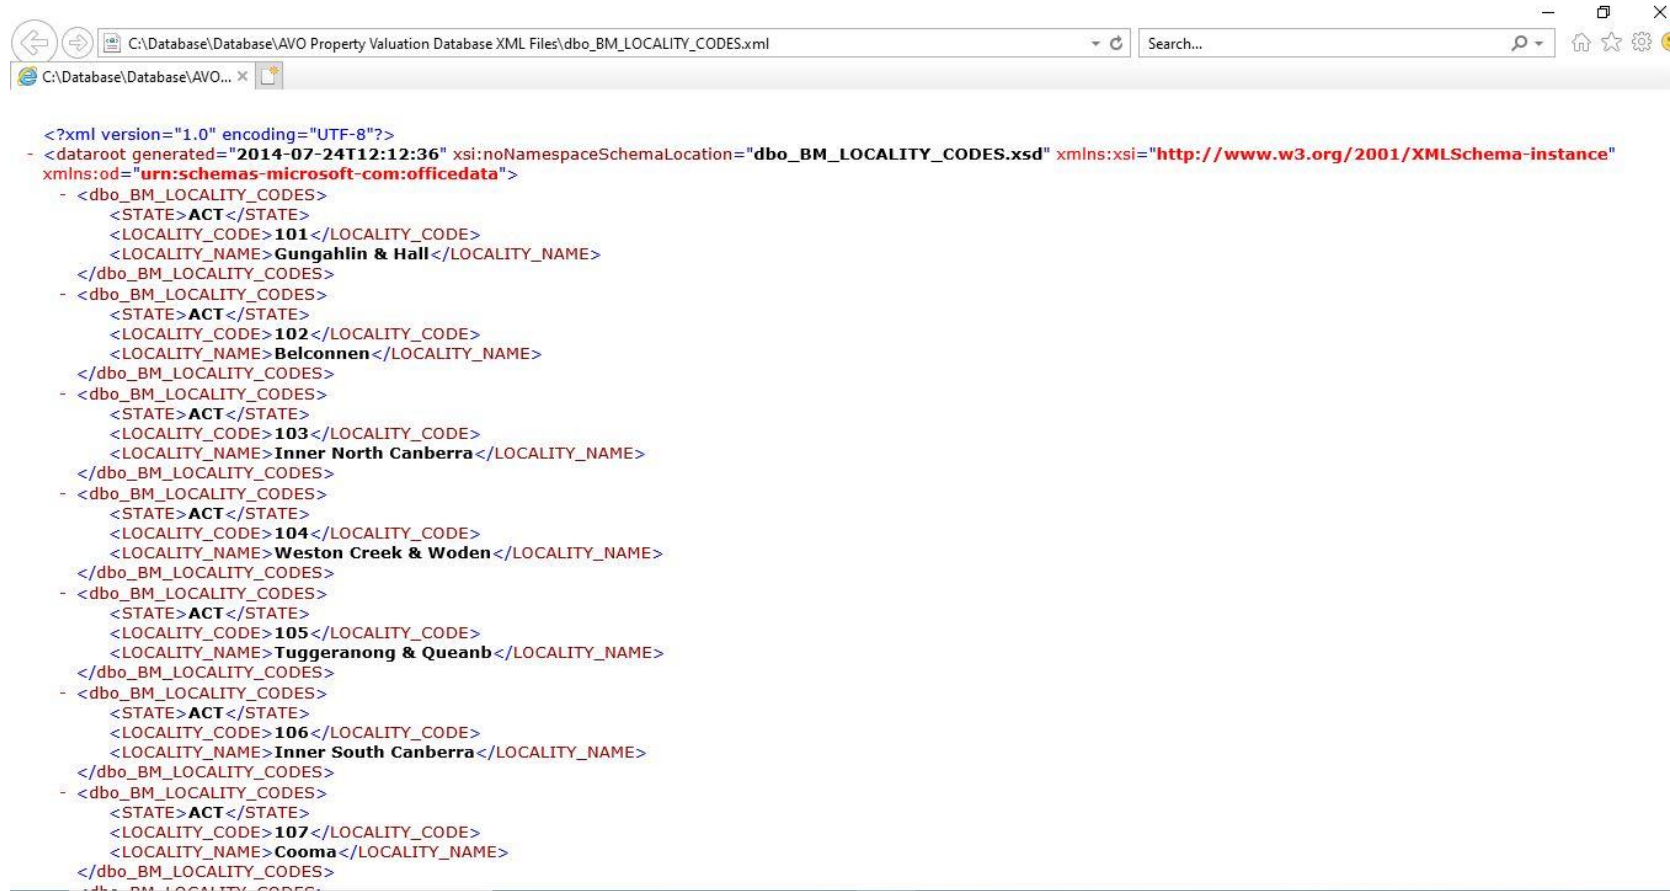

The screenshot shows a Windows File Explorer window with the following details:

- Address Bar:** This PC > Windows (C:) > Database > Database > AVO Property Valuation Database XML Files
- Left Pane (Navigation):** Quick access, Desktop, Downloads, Documents, Pictures, AVO database, AVO Property Valua, AVO Property Valua, media1, OneDrive, This PC, 3D Objects, Desktop, Documents, Downloads, Music, Pictures, Videos, Windows (C:), Network.
- Main Pane (File List):**

Series Registration for A14526

Series details for: A14526	
Series number	A14526
Title	Australian Valuation Office Database, 2014
Accumulation dates	14 Jan 2014 - 29 Jul 2014
Contents dates	14 Jan 2014 - 29 Jul 2014
Items in this series on RecordSearch	3 Click to see items listed on RecordSearch. Please contact the National Reference Service if you can't find the record you want as not all items from the series may be on RecordSearch.
Agency/person recording	14 Jan 2014 - 30 Jun 2014 CA 7089, Australian Valuation Office, Central Office 01 Jul 2014 - 29 Jul 2014 CA 995, Australian Taxation Office, Head Office
Agency/person controlling	01 Jul 2014 - CA 995, Australian Taxation Office, Head Office
Quantity and location	0.1 metres held in ACT
System of arrangement/ control	Single number imposed by the National Archives
Range of control symbols	[1] to [3]
Predominant physical format	ELECTRONIC RECORDS
Series note	<p>Function and purpose This Series is the legacy valuation database of the Australian Valuation Office called VOIS (Valuation Office Information System). The Series comprises three items. One item consists of technical database documentation including the data dictionary, which explains the structure of the database and the meaning of the data it contains. One item contains the raw SQL data in .mdf (SQL Server data file) and .ldf (SQL Server log file) format. The third item contains the data exported to XML format.</p> <p>The VOIS database recorded all valuation data collected by the AVO. The VOIS database has 106 tables, several of which were in use in the decade up to 2014, when the database was decommissioned. Some of the VOIS tables were out of date or obsolete as of 2014, but were still retained in the database and are of historical interest. There are also some tables that were in sporadic use up to the year 2000 or earlier. The 106 tables comprise over 13,000,000 records.</p> <p>Related legislation</p> <p>Using the series</p> <p>Language of material</p> <p>Physical characteristics</p> <p>System of arrangement and control Single running number imposed by the National Archives</p> <p>Relationships with other records</p> <p>Finding aids</p> <p>Access conditions</p> <p>Series history</p> <p>Provenance</p> <p>Immediate source of acquisition These electronic records were sent to the National Archives when the Australian Valuation Office (AVO) was closed on 30 June 2014.</p> <p>Custodial history</p> <p>Quantity in agency custody</p> <p>Disposal history</p> <p>Publication note</p> <p>Additional information</p> <p>End notes</p> <p>Sources (Less)</p>

Problem is...

- Disconnect between development of disposal schedule and transfer
- We haven't decided what we need to preserve to ensure meaningful access in the future.
- The raw data may not be enough:
 - Native SQL format is software dependent
 - Flat file format (e.g. CSV) has limited usability
 - Need technical documentation to understand data
- Are there any characteristics of the database that we need to preserve to ensure meaningful accessibility and usability?
- There is not be a one-size-fits-all approach to database transfer and preservation.

Database Preservation Project: December 2020-July 2021

“to develop and agreed approach to the appraisal, transfer, preservation and management of database, and to develop guidance advice and other supporting artefacts to support that approach.”

Product 1: SIARD Case Study

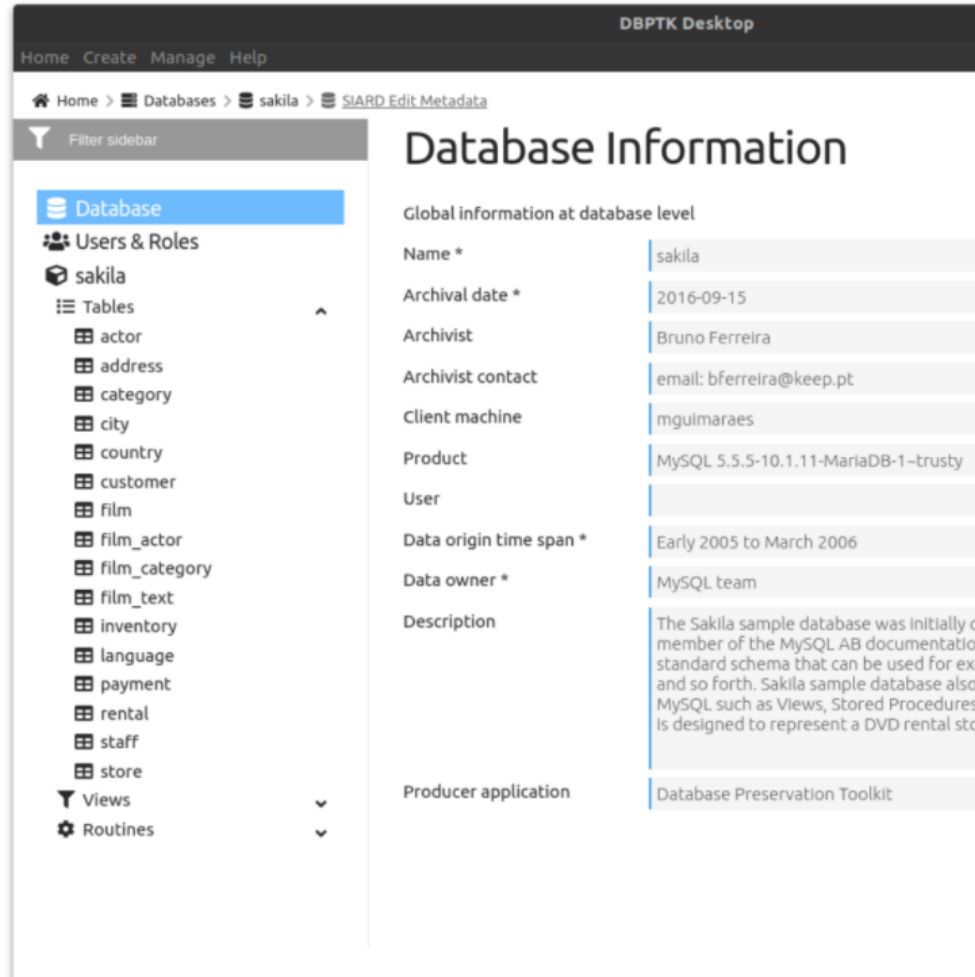

Image Source: <https://database-preservation.com/#desktop>

Valuation Office Information System

- 2014 – Closed agency transfer
 - Data file in native SQL (.MDF)
 - Log File in native SQL (.LDF)
 - Table data individually exported in XML
 - Technical documentation (Data Dictionary)
 - Screenshots of UI
- 2021 – SIARD file

NATIONAL ARCHIVES OF AUSTRALIA

Checklist of questions to ask an Agency with data to transfer from a Relational Database

R305582021

Digital Archives Research and Innovation 2021

4. Using this checklist

The checklist is intended to assist National Archives' staff to guide discussions with agencies to come to a shared understanding of the selection and transfer process, i.e. appraisal, pre-ingest and ingest and will not be comprehensive for every system or every transfer.

While the checklist is detailed, it is important to note there are four main questions that will shape the form the transfer takes and which will influence which questions to focus the conversation on, and which will shape the transfer.

1. Is the entire database RNA or only part of it?
2. If only part is RNA, does the system have the capacity to export that content?
3. If a partial export is not possible or it is all RNA, can it export the entire dataset?
4. Establish if periodic snapshots are required, i.e. does the system retain all changes and have roll-back capability, or is the content subject to ongoing change? If subject to change, eg. data is overwritten or permanently deleted, periodic transfer will be necessary.

The investigation may involve several meetings involving different staff and roles, especially for more complex databases/business systems. Initial meetings/contact usually take place with the agency IM manager/contact. Later meetings will include IT and will discuss system functionality/capability in detail.

It is recommended that the information gathered in response to these questions is collaboratively documented and shared between National Archives and the agency, so it can be built on as the transfer progresses.

NATIONAL ARCHIVES OF AUSTRALIA

DETERMINING OPTIONS FOR TRANSFERRING DATABASES: GUIDANCE FOR NATIONAL ARCHIVES' STAFF

Digital Archives Research and Innovation 2021

▪ Determining frequency of transfer

This section lists criteria for determining whether a transfer of data contained in a database is a single one-off transfer or a periodic snapshot carried out on an agreed frequency.

▪ One-off transfer

One-off transfers (or end-of-life transfers) are usually made in the following situations:

- → Closed agency
- → Machinery of Government change, for example the inheriting agency may decide to transfer the database to the National Archives
- → Decommissioning of system
- → At the point of migration to a new system or platform
- → Expiry of software or system licence or support

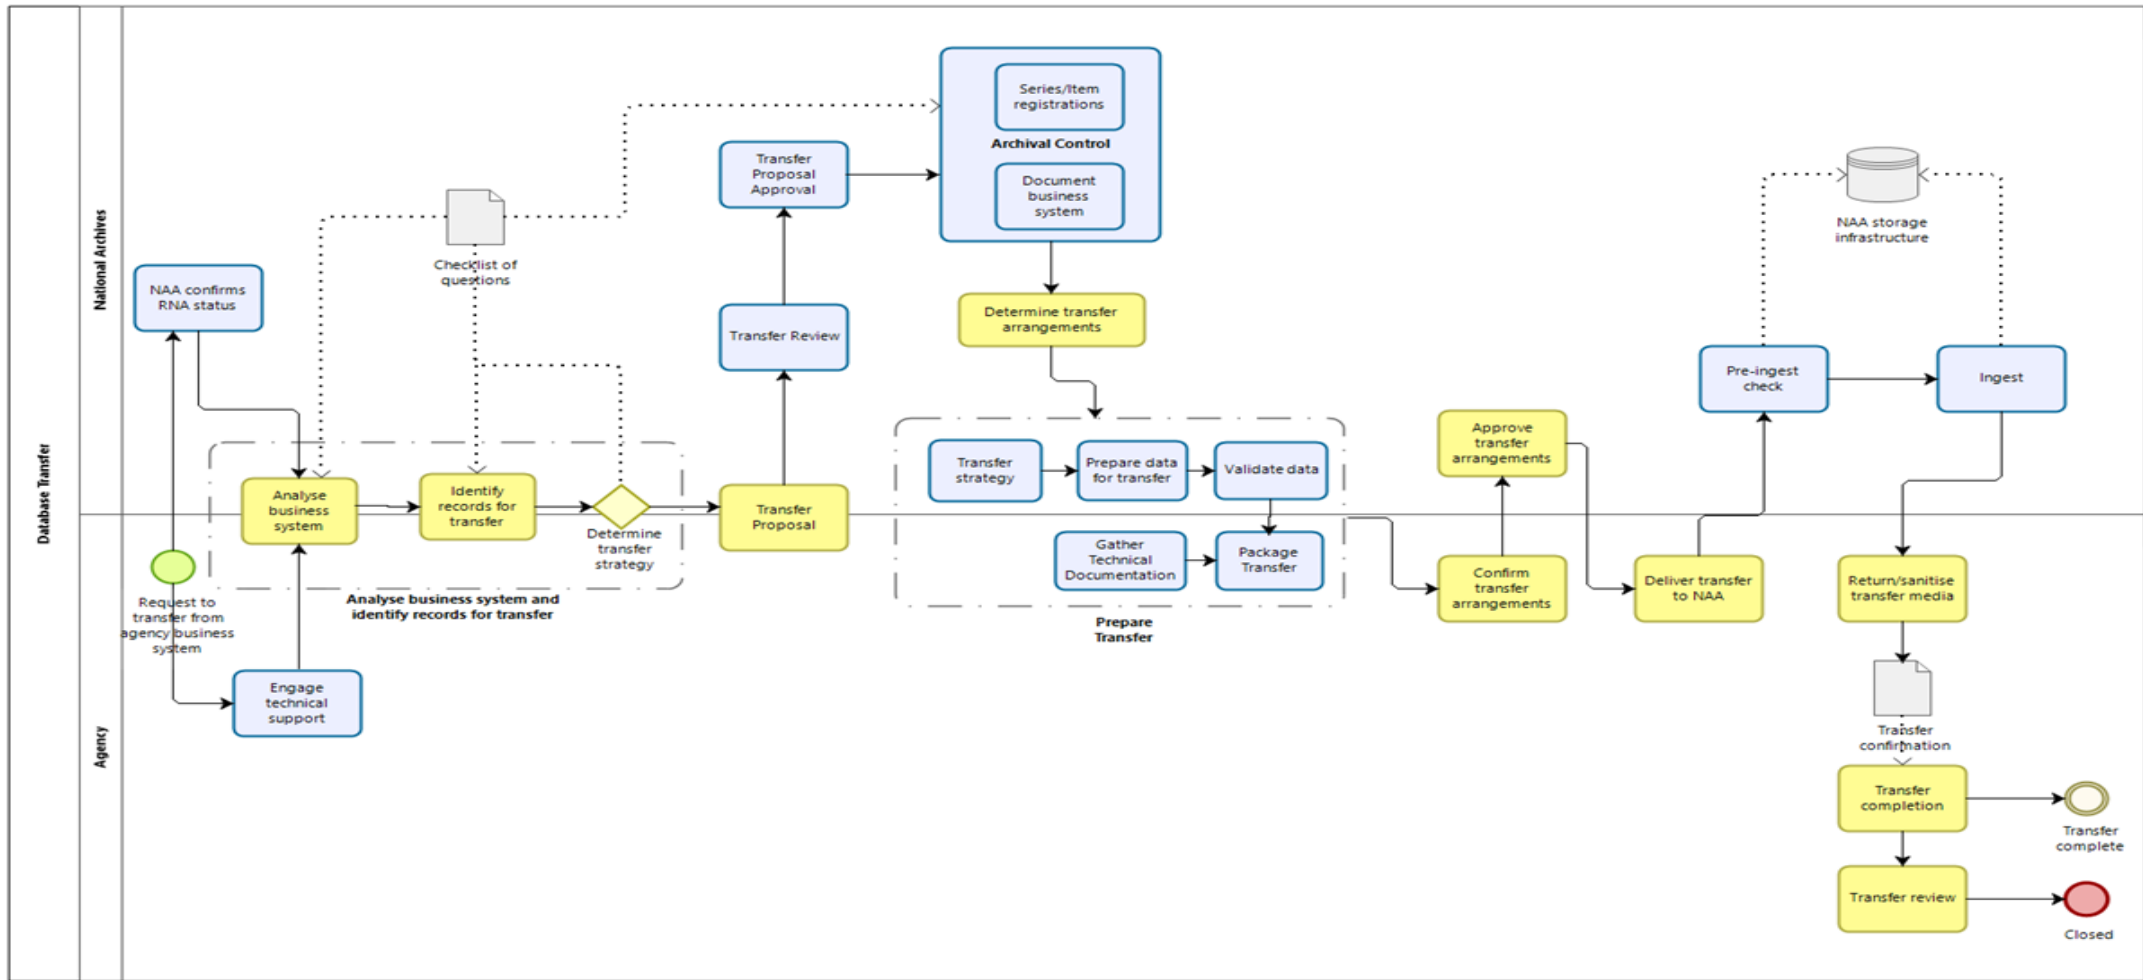

▪ Periodic snapshot

Periodic snapshots are made in the following situations and need to be appropriately planned and managed:

- → Business system periodically deletes or overwrites data without capturing an accurate and complete log of data changes
- → Business system is highly dynamic
- → Business system has on-going business use, but high value or risk has led to a decision to transfer periodically to the national Archives.

Attention needs to be given to frequency of transfer, and whether the transfer is incremental (i.e. the changes between snapshots) or a complete capture of content. Frequency of transfer would be determined by factors such as when data is deleted or overwritten (e.g. every five years), or when there is significant change, for example an annual transfer may be required for a registration database that is updated and reviewed at the end of the financial year.

Transfer Process Maps

Additional Metadata for Database/Business Systems

Purpose

This document identifies additional descriptive metadata elements that should be captured to better describe the technical structure and functionality of databases/business systems. While the CRS system adequately captures the recordkeeping context of record creation and management, digital systems require at least some of their technical components and properties to be identified and described so that they can be properly understood into the future, long after they have ceased to exist. This metadata is also important when providing access to the information and also for preservation planning.

Currently, these additional elements could be added to Series and/or Item Notes in RecordSearch, and could be captured in discussions with agencies when gathering information about the database/business system. The Series Registration Form could be modified to include these elements. In the fullness of time, as work continues on the National Archives' business systems, system functionality can be improved to better accommodate these elements.

As with other description activity, the professional judgement of the transfer officer/description officer/archivist should be used when determining what descriptive information to capture. This document is provided as a guide and prompt.

The Standards Mapping column links to the same or similar properties in other relevant standards: Archival Control Model (ACM), Data Dictionary for Preservation Metadata (PREMIS), Australian Government Recordkeeping Metadata Standard (AGRkMS), Software Metadata Recommended Format Guide (SMRFG).

Metadata Elements

Field	Description	Comments	Series or Item	Standards mapping
Database Management System	What database management system including version and date, was used, e.g. SQL Server, MySQL, Oracle, PostgreSQL etc?	Important for access and context. Important if emulation is an access option.	Series Note	ACM: 21.3 Creating Application Name ACM: 21.4 Creating Application Version PREMIS: 1.5.5.1 Creating

Project Outcome: Transferring Databases

- No one-size-fits-all approach
- Interpretation of the disposal class/analysis of business system
- Transfer could comprise a combination of:
 - SIARD file
 - Native SQL files
 - Export in an open data format like CSV, XML, etc
 - Transfer of reports/views
 - Documenting how the business system was used
 - Technical documentation – data dictionary, data model
 - Full descriptive information documented in the archival control system

Future Work

- Continue to develop knowledge and capability
- Pilot database transfers – Microsoft Dynamics, Lotus Notes
- Work with agencies to imbed transfer decisions in the Records Authority creation process

Thank You
